THE GETTY VOCABULARIES AND LINKED OPEN DATA:
INTRODUCTION AND EDITORIAL PERSPECTIVE

revised September 2014

Patricia Harpring
Managing Editor, Getty Vocabulary Program
Table of Contents

- What are the Getty vocabularies?
- Scope and content of the Getty vocabularies
- Getty vocabularies to LOD: Editorial perspective
- What is LOD? In brief.
What are the Getty vocabularies?

- *Catherine wheel* or *rose window? Mona Lisa* or *La Gioconda?*

- The AAT, TGN, ULAN and CONA contain multilingual terminology and other related data to describe
  - visual art, architecture, other cultural heritage works, conservation, archaeology, archival materials, visual surrogates, and related bibliographic materials
The Getty Vocabularies

Discover, link, access, retrieve, research, catalogue, index
Explore art, architecture, cultural heritage, conservation, archaeology, and beyond

- Getty vocabularies are valued as authoritative
  - Grow through contributions from experts
  - Contributors and sources are cited

- Compiled, merged, edited, and published by the Getty Vocabulary Program and our talented, tireless technical team

- Data is made available in various ways: via online searching; relational tables, XML format, Web services APIs
  - Now as Linked Open Data: structured and published to make it openly accessible and shareable on the Semantic Web
    - Open Data Commons Attribution License (ODC-By) v1.0
    - Allows sharing, creation, adaptation of data with attribution

Patricia Harpring © 2014 J. Paul Getty Trust. For educational purposes only. Do not distribute.
How can the Getty vocabularies be obtained?

- Consult the vocabularies on the Getty Web site, free of charge, by searching individual terms and names.

- Raw data files may be licensed from the Getty in relational tables and XML format and through Web services APIs.
Linked Open Data: AAT, TGN, ULAN, and CONA will be released sequentially as Linked Open Data (LOD) through 2015.

AAT and TGN were released in 2014, published in SKOS and SKOS-XL formats under the ODC-BY 1.0 license.
 Getty vocabularies are thesauri compliant with national (NISO) and international (ISO) standards for thesaurus construction.

They are compliant with / map to other standards:
- CDWA (Categories for the Description of Works of Art)
- CCO (Cataloging Cultural Objects)
- VRA Core (Visual Resources Association core categories)
- LIDO (Lightweight Information Describing Objects)
- etc.
Among the features that allow the Getty vocabularies to be used in cataloging, retrieval, and linking are the following:

- Each Getty vocabulary records and terms are identified by **unique numeric IDs**
- The Getty vocabularies are linked to each other
- The Getty vocabularies share a core data structure
The Getty vocabularies are linked to each other

ULAN
TGN
AAT
Iconography Authority

Work Records

Source Records
The Getty vocabularies share a core data structure

**SUBJECT**
- MAIN TABLE
  - basic record information, unique ID, *parent_key*, record type, descriptive/scope note, flags

**NAMES / TERMS**
- multiple names, one is flagged preferred; dates for names

**PLACE TYPES/ROLES**
- multiple place types or roles, one is flagged preferred, dates

**ASSOCIATIVE RELATIONSHIPS**
- links between subjects, dates

**Biography**
- display bio, birth/death dates, places

**Revision History**
- editor name, action, date of action

The LOD Team

- The majority of the work is being done by our in-house team, but we have established an open community and welcome collaboration:
  vocabLOD@getty.edu

- The team
  - Getty ITS: Joan Cobb, Gregg Garcia
  - Outside consultant, Ontotext: Vladimir Alexiev

- Getty Vocabulary Program (GRI)
  - Patricia Harpring, Jon Ward, Antonio Beecroft, Robin Johnson

- ITS and GRI joint LOD steering committee
  - Murtha Baca, David Farneth, Joe Shubitowski, Mike Clardy, Marilyn Gillette, Joan Cobb, Gregg Garcia, Patricia Harpring

- External Advisors (see list on our LOD page)
### How are vocabularies used?

**Record Type:** item

**Object Type:** watercolor (AAT)

**Title:** Henderson as Falstaff

**Creator Display:** Victor Moblard (American, born 1851 in Sweden), after an etching by John Kay (British caricaturist, 1742-1826)

**Related People:**
- artist: Victor Moblard (ULAN)
- artist: John Kay (work depicted) (ULAN)

**Materials and Techniques:** drawing, watercolor on wove paper

**Terms:**
- drawing (AAT)
- watercolor (AAT)
- wove paper (AAT)

**Dimensions:** 14 x 9 1/2 inches

**Date of Creation:** late 19th century

**Inscription:** below figure: HENDERSON as FALSTAFF. / "I never see thy nose, but I think upon hellfire." / Kay fec 1785

**Locations:**
- current: Folger Shakespeare Library (Washington, DC, USA) (ULAN)
  - address note: ART Box M785 no.3 (size L)
  - ID: Hamnet Holdings ID: 337094

**Provenance:** former owner: Toedteberg, Augustus, 1823-1826

**Subjects:**
- literary theme (general)
- portrait (general)
- Falstaff, John, Sir (fictional character) (IA)
- man (male human) (AAT)
- Henderson, John (British actor, 1747-1785) (ULAN)

**Note:** Kay's depiction may refer to a provincial performance of the play....

**Sources:** Folger Shakespeare Library [online]
Scope and Content of the Getty Vocabularies

AAT      TGN      ULAN      CONA
AAT, the Art & Architecture Thesaurus®

Generic terms for describing art and architecture (decorative arts, other material culture, visual surrogates, archival materials, archaeology, and conservation) (e.g., *oil paintings*, *Baroque*, *lithographers*, *sintering*).

Current totals: 36,000 records; 245,000 terms

- AAT is multilingual; large translation projects are underway
- Conceptually organized from terms to describe abstract concepts to generic terms for concrete, physical artifacts
- Facets are the upper levels of the AAT structure
- AAT is not organized by subject matter or discipline
AAT, the Art & Architecture Thesaurus®

TGN, the Getty Thesaurus of Geographic Names®
Names, other information for current & historical administrative places (cities, nations, empires) and physical features (e.g., Firenze, Roman Empire, Ganges River).
Current totals: 1,241,000; 1,800,000 names

- It includes formerly inhabited places, archaeological sites, and historical places with unknown exact locations (i.e., “lost settlements”)
- It focuses on places important to study of art and related disciplines
- It grows through contributions from large national geographic databases, the expert user community, archaeology projects, scholars, etc.

CONA, the Cultural Objects Name Authority®

Titles, other information for moveable works (paintings, sculpture, prints, drawings, photographs, ceramics, etc.) and architecture (buildings, bridges, etc.) (e.g., Hagia Sophia, Mona Lisa, Fantastic Landscape with a Pavilion).

Current totals: [5,500 records; 9,300 titles]

- It includes works executed or designed (e.g., a built work for which only design drawings exist); extant or destroyed / historical
- CONA is a thesaurus; it is also mapped to CDWA, CCO, CIDOC CRM, and LIDO
- CONA grows through contributions from repositories of art and the expert cataloging and scholarly community
Under discussion are the possible applications of CONA:

Perhaps in the future

- CONA could be a resource to link the Getty vocabularies to records for art and architecture (in LOD or otherwise)
- CONA could link subject terminology to art and architecture records
- CONA could facilitate linking between works, including works held in different repositories but having historical relationships (e.g., studies, disassembled manuscripts, etc.)
CONA, the Cultural Objects
Name Authority®

CONA, the Cultural Objects Name Authority®

2. CONA could link depicted subjects

- Whereas libraries have a tradition of cataloging the subjects of works
- Many art museums typically do not index subject matter depicted in / represented by works
  - [sitters, places, events, iconographical themes, dedication of certain buildings, etc.]
  - In a survey conducted of American art museums’ data, of the core fields (agreed by consensus in CDWA, CCO, etc.), all museums included all core fields except the subject [by OCLC (Online Computer Library Center, a nonprofit computer library service and research organization); core fields per CCO and CDWA (Categories for the Description of Works of Art)]
CONA, the Cultural Objects Name Authority®

Index three levels of subject analysis

Objective **description**

**Identification** of named subject

**Interpretation** of the meaning or theme

- For such subject indexing: CONA can link to AAT, TGN, ULAN, CONA itself, and the CONA Iconography Authority

- As well as to other sources for subjects, such as the US Library of Congress authorities and Iconclass *(we intend to work closely with Iconclass, a Dutch classification system, www.iconclass.nl/)*
Lincoln on the Battlefield of Antietam; albumen print; Alexander Gardner (American photographer, 1821-1882); 1862; 8 5/8 x 7 3/4 inches; J. Paul Getty Museum (Los Angeles, CA); 84.xm.482.1

**General**
- portraits
- history and legend

**Specific**
- Antietam National Battlefield (Sharpsburg, Maryland, United States) TGN CONA IA
- American Civil War (event) CONA IA
- Abraham Lincoln (American president 1809-1865) ULAN
- John McClernand (American Union General, 1812-1900) ULAN
- Allan Pinkerton (American Secret Service agent, detective, 1819-1884) ULAN
- army camp AAT
- tents (portable buildings) AAT
Plan and Elevation of the façade of San Lorenzo; drawing; Aristotile da Sangallo after Michelangelo; late 15th century; 32.0 x 21.5 cm (12 1/2 x 8 3/8 inches); pen and sepia ink; Staatliche Graphische Sammlung (Munich, Germany) #33258.
Depicted Subjects

**General**
- religion and mythology
- human figure(s)

**Specific**
- bodhisattva
- Avalokiteshvara
- Maitreya
- compassion
The CONA Iconography Authority
Named events, religious/mythological iconography, fictional characters and places, themes from literature

- Includes the proper names of subjects not covered by other Getty vocabularies
- The CONA Iconography Authority (IA) is a module within CONA; over time, it could become a stand-alone authority through contributions
- Includes links to other sources, such as Iconclass and the US Library of Congress subject authorities
### Sample record

**ID:** 1000085

Getty Vocabularies to LOD: Usage and Editorial Perspective

AAT    TGN    ULAN    CONA
How are vocabularies used?

- Traditional use of vocabularies for retrieval focuses on the names
  - If a user asks for one name/term, all of the synonyms can be used for retrieval
  - For example, if a user searches on “Giovanni da Bologna”

From ULAN

- Giambologna
- Giovanni da Bologna
- Jean Bouologne
- Bologna, Giovanni da

“giambologna” OR “giovanni da bologna” OR “giovanni bologna” OR “jean boulogne” OR “bologna, giovanni da”
How are vocabularies used?

LOD and new retrieval methods can incorporate hierarchical and associative relationships, and other links or implied relationships to answer more interesting complex questions and aid serendipitous discovery.

Associative relationships

Giambologna (Flemish sculptor and architect, 1529-1608, active in Italy)

Marie de Medici (French queen, patron, 1573-1642)

Tacca, Pietro (Italian sculptor and architect, 1577-1640)

Display Date: from 1592
Start Date: 1592   End Date: 1608
For an example of a “use case” illustrating how the Getty vocabularies can aid in research, see the Prezi presentation: Getty Vocabularies as LOD.

See how a researcher begins a journey to find out about incense burners, and within minutes rather than days finds all she wished to find, as well as unexpected discoveries through LOD.

http://prezi.com/om6v5oa-o8ob/getty-vocabularies-as-lod/?utm_campaign=share&utm_medium
The Getty vocabularies have always been compiled by experts
- Using authoritative sources
- Rules in extensive editorial manuals

Seen through the LOD lens, any inconsistency or omission become ever more obvious

Getty Vocabulary Program analyzes and cleans up of the data for LOD releases
From conceptual to actual links

Lookup lists had been based on AAT, but had gotten out of sync with AAT over the years

E.g., nationalities, roles in ULAN and place types in TGN must map to AAT terms
Nationality/Culture/Race/Ethnicity in ULAN was conceptual, now needed to be linked to AAT.

Certain matches must be resolved by hand.

Many links cannot be made automatically.

Matching ULAN Nationality to AAT:

- **No match**
  - Example: Hessian

- **False match**
  - Example: Bavarian

- **Ambiguous match**
  - Example: Merovingian

This is an example of a bad match, type of burlap.
Editorial perspective: LOD

- Since CONA is linked to the other vocabularies, it is necessary to match incoming values to the AAT, ULAN, TGN, and CONA Iconography Authority when loaded.
- The CVA/Processor was developed for editors to use where auto-links are not possible.

**CONA record, creator**

What is LOD: In Brief

AAT  TGN  ULAN  CONA
This presentation is not a primer on **controlled vocabularies** nor on what is LOD

They focus on issues surrounding the Getty vocabularies specifically

For basic information on vocabularies, see *Introduction to Controlled Vocabularies* (Harpring, revised 2013) and its bibliography

For basic information on what is LOD, see this Europeana video [http://vimeo.com/36752317](http://vimeo.com/36752317). World Wide Web Consortium (W3C) Glossary: [www.w3.org/TR/ld-glossary/](http://www.w3.org/TR/ld-glossary/)

Patricia Harpring © 2014 J. Paul Getty Trust. For educational purposes only. Do not distribute.
Why Linked Open Data?

- When data is linked and open = data is structured and published according to principles allowing it to be interlinked and made openly accessible and shareable on the Semantic Web
- Linked Open Data on the Web has the potential to connect data from diverse domains
  - can use the Web to create defined “typed” links for meaningful linking between data from diverse resources
- LOD will enable a new generation of search engines to follow the links between data resources in order to deliver ever more complete answers as new data sources become available
Why Linked Open Data?

- W3C standards (RDF) to describe the data in triples
- Three column format – known as a triple – forms the fundamental building block of semantic representations.
- Subject - corresponds to the entity – a ‘thing’
- Predicate – property of the entity - names, birth/death dates
- Object - Subjects in another triple OR Literal values
Why Linked Open Data?

rhyta (drinking vessels, <vessels for serving and consuming food>, ... Furnishings and Equipment (Hierarchy Name))

Note: Refers to vessels from Ancient Greece, eastern Europe, or the Middle East that typically have a closed form with two openings, one at the top for filling and one at the base so that liquid could stream out. They are often in the shape of a horn or an animal’s head, and were typically used as a drinking cup or for pouring wine into another vessel. Drinking was done by holding the rhyton above the drinker’s head and catching the stream of liquid in the mouth.

Terms:
rhyta (preferred, C, U, LC, English-P, D, U, PN)
(Greek (transliterated)-P, D, U, PN)
(Spanish, UF, U, PN)
rhyton (C, U, English, AD, U, SN)
(Greek (transliterated) AD H SN)
Why Linked Open Data?

- In an LOD world, users’ research will operate on top of an unbound, global data space
- LOD will facilitate the ability to derive new information from the information the user already has, through inference, classification, and other applications of logic onto the data
- Publishing information as LOD unlocks the full knowledge potential of databases, allowing researchers to access, query, and recombine data created and stored by institutions of all kinds—libraries, museums, archives, research centers, laboratories, universities, governments, publishers, and others
- LOD has the enormous potential to advance scholarship within the humanities and beyond
Why Linked Open Data?

- The time was right for the Getty, particularly as the LOD project coincides with the Getty’s Open Content initiative
  - The J. Paul Getty Museum and Getty Research Institute (GRI) make available, without charge, all available digital images to which the Getty holds the rights or that are in the public domain to be used for any purpose. No permission is required
    - www.getty.edu/about/opencontent.html

- Also, GRI Portal: The Getty Research Portal™ is an online search platform providing global access to growing number of digitized art history texts

- The Getty Conservation Institute (GCI), GRI, and the Getty Museum are looking into releases of LOD metadata
Licensing the data

- Historically, the Getty vocabularies relational tables, XML, (MARC) were licensed, with use somewhat restricted; fees adjusted for not-for-profit and for-profit licensees
- Policy makers and legal experts analyzed which licensing was best for LOD

Open Data Commons Attribution License (ODC-By) v1.0

Allows that you (the users) are free to do the following:
- To Share: To copy, distribute, and use the database
- To Create: To produce works from the database
- To Adapt: To modify, transform, and build upon the database

- As long as you Attribute: You must attribute any public use of the database, or works produced from the database, in the manner specified in the license
  - For any use or redistribution of the database, or works produced from it, you must make clear to others the license of the database and keep intact any notices on the original database
- [http://opendatacommons.org/licenses/](http://opendatacommons.org/licenses/)
Linked Documents vs Linked Data

- **Linked Documents on the Web**
  - Connected by hypertext
  - Allows users to traverse via Web browsers
  - Data is made available in formats such as CSV, XML, or marked up as HTML tables

- **Linked Data on the Web**
  - Connects data from diverse domains such as people, books, scientific publications, films, genes, drugs and clinical trials, online communities, statistical and scientific data.
  - Enables new generation of search engines that follow the links between data sources to deliver more complete answers as new data sources appear.
  - Operate on top of an unbound, global data space.
  - Uses the Web to create typed links between data from different sources.
Linked Open Data (LOD)

- **Linked Data**
  - A method of publishing structured data so that it can be interlinked and become more useful.
  - It builds upon standard Web technologies such as HTTP and URIs.
  - But, rather than using them to serve web pages for human readers, it extends them to share information in a way that can be read automatically by computers.

- **Open data**
  - The idea that certain data should be freely available to everyone to use and republish as they wish, without restrictions from copyright, patents or other mechanisms of control.

- **Linked Open Data (LOD)**
  - A community project, sponsored by the Semantic Web Education and Outreach group of the W3C, to extend the Web with a data commons by publishing various open datasets as RDF on the WEB and by setting RDF links between data items from different data sources.
  - Both linked and open.
Linking Possibilities: Getty Vocabularies

http://vocab.getty.edu
The Getty Vocabularies acts as a conduit to connect the projects to each other.
Linking Possibilities: Our Partner’s Partners

[Diagram showing relationships between various vocabularies and databases, including AAT, ULAN, CONA, TGN, VIAF, and Arches.]
Linking Possibilities: Others
Resource Description Framework (RDF)

- One of the key ingredients of Linked Data.
- Provides a generic graph-based data model for describing things, including their relationships with other things.
- Three column format – known as a **triple** – forms the fundamental building block of semantic representations.
  - **Subject** - corresponds to the entity – a ‘thing’
  - **Predicates** – property of the entity - names, birth/death dates
  - **Objects** - Subjects in another triple OR Literal values
- Conceptualized anything (and everything) in the universe as a resource.
- Specifically supports evolution of schemas over time without requiring all the data consumers to be changed
- RDF has varying representations (e.g., XML, text, JSON)
LOD Ontologies & Vocabularies

- **Ontology**
  - Used to capture knowledge about some domain of interest. An ontology describes the concepts in the domain and also the relationships that hold between those concepts.

- **Vocabulary**
  - A vocabulary in the sense of knowledge systems or ontologies are controlled vocabularies. They provide a way to organize knowledge for subsequent retrieval.

- **Semantic Web Ontology**
  - This is a formal specification of a shared conceptualization of the information to be published.
  - Examples of the vocabulary used in ontologies: class, object property, role, category, property, resource, etc.
Uniform Resource Identifier (URI)

- Identifies a resource either by location (URL), or name (URN). It usually includes some type of unique and persistent identifier.
- URIs are not URLs but every URL is a URI
- The URI for a resource represented in an RDF statement is called the URI reference (URIref) for that graph node.
- URIs are used as ‘strong keys’ that are assigned to each of the nodes so that we can refer to them consistently across all the triples that describe their relationships.
- The URN that will be the base URI for AAT will be http://vocab.getty.edu/aat.
Web Ontology Language (OWL)

- Developed by the W3C
- Built as an extension to RDFS
- Provides a precise vocabulary that enables more powerful reasoning and inference over relationships with which to knowledge can be represented.
- Can be seen as a social contract between a data provider and a data consumer.
Simple Knowledge Organization System (SKOS)

- A language designed for representation of thesauri, classification schemes, taxonomies, subject-heading systems, or any other type of structured controlled vocabulary.
- Based on RDF
- SKOS is currently developed within the W3C framework
- Can be used on its own, or in combination with other ontologies.
LOD: Simple SKOS example

Sample concepts relationship in a pre-SKOS taxonomy

- Gato
- Perro
- Chien
- Mammal
- Mutt
- Bulldog
- Dachshund

Sample concepts relationship in SKOS

- Preferred label (English): "mammal"
- Preferred label (English): "dog"
- Preferred label (English): "cat"
- Preferred label (English): "bulldog"
- Preferred label (English): "dachshund"
- Preferred label (Spanish): "perro"
- Preferred label (Spanish): "gato"
- Preferred label (French): "chien"
- Alternative label (English): "mutt"
- Alternative label (Spanish): "chucho"

Triplestores

- Are purpose-built databases for the storage and retrieval of the type of unstructured information express in RDF triples that makes up the Semantic Web.
- Are not relational databases.
- Query language used with triplestores is typically SPARQL.
- In addition to queries, triples can usually be imported/exported using RDF and other formats.
- Some triplestores store billions of triples.
SPARLQL Protocol RDF Query Language

- Was made a standard by the RDF Data Access Working Group (DAWG) of the W3C.
- Is considered one of the key technologies of the semantic web.
- Allows users to write unambiguous queries.
- SPARQL endpoint is a service that accepts SPARQL queries and returns results.
- Queries can be distributed to multiple SPARQL endpoints.
- Fundamental difference between SQL and SPARQL
  - Data exposed via SPARQL on any server can be queried by a SPARQL client.
  - Data from multiple places can be combined dynamically, as needed, to create new forms of information.
Why do we care?

- The way data is being published on the web is currently in transition.
- A current trend in managing art information is to increasingly make data art, architecture, and cultural heritage objects available as Linked Open Data.
- This applies to the information directly describing the objects, but also the vocabularies used in the descriptions.
- For years now, the Getty Vocabulary team has been receiving legitimate requests to publish our thesauri as LOD.
- It is time to stop asking “why” and to start exploring “how”.

Key values to Linked Open Data

- **Everyone** can access, reuse, enrich and share the data published in LOD format!
  - It is somewhat like Wikipedia and it makes “interworkability” more feasible.

- LOD disambiguates your search. In other words it eliminates the noise you sometimes get in Google search. What you are seeking is more precise because of the way you tag the information you are converting to LOD.

- LOD connects you to all kinds of relevant information creating a playground for serendipity and it updates that information dynamically within the same web space.

- LOD is able to connect data from the Web that was not previously connected.

The Getty Vocabularies

Discover, link, access, retrieve, research, catalogue, index
Explore art, architecture, cultural heritage, conservation, archaeology, and beyond

History of the Getty vocabularies:

• The AAT, ULAN, and TGN were begun in the mid-1980s
  • To meet the needs of the Getty and outside art museum, visual resources, archives, and art library communities for authoritative vocabularies to aid in the indexing and retrieval of art information
  • Each was conceived and constructed differently, with the AAT originally located in Williamstown, Massachusetts
  • Data structure, editorial rules, systems, management of AAT, TGN, and ULAN were united in 1995 in Los Angeles
  • Analysis for CONA was begun in 2005
  • Even so, we are “standing on the shoulders of giants”

• Original work on controlled vocabularies for art began with International Committee for the History of Art (CIHA), and the TAU (Thesaurus Artis Universalis) committee, Center for the Advanced Study in the Visual Arts (CASVA) at the National Gallery of Art, Washington, as well as dozens of talented visionaries, analysts, programmers, information scientists, managers, and editors at the Getty (AHIP, GII, and now the Vocabulary Program at the Getty Research Institute), with dedicated contributors and users worldwide.
